Careers

ABOUT RADAR

The Radar team is small, currently less than 15 people, which means early employees will have a meaningful impact on our product and business strategy. Our team is just getting started and we have a list of products to bring to market.

Our first product, Radar Relay, is defining a new category of decentralized token exchange called Relayers. As one of the earliest live Ethereum decentralized applications (dapps) on the market we feel a sense of responsibility to our users and to the blockchain ecosystem to set the precedent for user experience, functionality, and compliance.

We are looking for individuals who share this level of accountability and have a vision to improve blockchain accessibility. We care less about location and industry area experience and more about purpose and motivation. Must love Doge.

DEVOPS ENGINEER

RESPONSIBILITIES:

- Implement/manage secure and scalable deployment infrastructure
- Implement/manage backend Ethereum node scaling roadmap

REQUIRES EXPERIENCE IN:

- Docker
- Kubernetes management
- Google Cloud or AWS management (monitoring and metrics)
- Continuous integration implementation and management
- Scaling backend resources to meet new demand

NICE TO HAVE:

- Knowledge or interest in Ethereum node architecture
- Knowledge or interest in Geth and/or Parity
- Excitement at the prospect of implementing custom low-level Ethereum infrastructure to meet our team's needs
- Experience in HTTP load balancing products
